Windows Registry Forensics

Hands-On

Part A – Registry Analysis Using Registry Explorer

*(Students must use the registry hive files provided in **RegistryFiles-2.zip**.)*

Answer the following:

1. What is the computer name of the target system?

2. What is the last shutdown time of the system?

3. What is the operating system version installed on the target system?

4. What user accounts are present on the system?

5. What USB devices have been connected to the system?

6. What programs are configured to run at system startup?

7. What recently accessed documents can be identified from the user registry?

Part B – Registry Analysis Using RegRipper

*(Students must use registry hive files extracted from their **own system**.)*

Answer the following:

1. What is the exact last shutdown timestamp extracted from the SYSTEM hive?

2. List all USB storage devices connected to the system along with their serial numbers.

3. What installed applications are present on the system, including installation details?

4. What programs were executed by the user according to registry artifacts?

5. Identify any startup persistence entries present in the user registry.

Assignment : Please draft the report containing the procedures learnt from the above exercise and include your screenshots wherever applicable.
